

## Evo

The Evo frame (plate) is designed for high-level athletes who execute triple-rotation jumps and advanced spins, requiring the maximum performance from their skates. The different angles of the king-pins increase agility on edges, and optimal centering for spins. Trim lowered by 5mm which considerably increases stability in the landing of jumps, and maneuverability while pressing edges. Differentiation between left and right frame, which facilitates the toe-assisted jumps, namely the Toe-Loop, Flip y Lutz. "Click-action" mechanism that allows for heightened precision with truck-adjustment, maintaining their orientation even during more complex movements and skating. Frame derived from a drawn Ergal bar, and completely created using computer numerical control (CNC) machining. 13mm king-pins inclined to 18° (anterior) and 15° (posterior), with lowered trim. Elastomer cushions available in 5 hardnesses (colors). Aluminum trucks with 7mm steel axles and adjustable pivot pin. Toestop and tool kit included.
